1 Exam questions

- Exercise **synch 31**: $P_1 8, 3, 4, 5$; $P_2 1, 9, 4, 5$; $P_3 1, 3, 5, 5$; $P_4 1, 3, 4, 9$;
- Exercise **synch 32**:
 1. it's not truly multicast because all 3 starting clocks are different, while in multicast there could be only one different from the others.
 2. $P_2 receive(m4) \neq (6, 5, 5)$
 3. $P_3 send(m2) \neq (6, 4, 4)$
 4. links are FIFO but $P_1 receive(m4) < P_1 receive(m2)$ while $P_3 send(m2) > P_3 send(m4)$
